

Aim: How do we practice creating programs in Python?

Today's class will be about practicing the skills you've learned thus far to prepare for your unit project.

Open Replit to get started!

Friend Test

- Pick 2-3 of your favorite colors.
- Pick 2-3 of your favorite school subjects.
- Using Replit, create a **new program** that will determine if the user can be your friend. In order to pass the Friend Test, the user must pass 2 simple requirements:
 - 1) the user's favorite color must also be one of your favorite colors
 - 2) the user's favorite subject must also be one of your favorite subjects
- Make sure your program tells the user whether they passed the test or not.

You may work with a partner on this,
but you should each have a copy of
your own code!
